Summary

Junior Developer, with a diverse background in engineering, IT project management, economics and consulting. My experience has given me the ability to plan and work through problems methodically whether I am working alone or in a team-based environment. I have a passion to continuously learn which led me to take on the challenges of web development. My innate curiosity is what keeps me looking for answers to complex problems. I am particularly interested in databases, how data is stored and turning data into relevant information.
